ABSTRACT

The ezAccount System is a simple and practical tool designed to help business owners manage their finances more easily and accurately. Instead of relying on Microsoft Excel or manually writing down transactions, which can be time-consuming and prone to errors, this system automatically records income, expenses, and other financial activities in an organized way. It stores everything in one place, making it easier to track and access past records whenever needed. The system can also generate useful reports such as monthly summaries and profit and loss statements, helping users better understand their business performance. With ezAccount System, business owners can stay organized, save time, and focus more on growing their business rather than dealing with paperwork and manual calculations.

CHAPTER 1

INTRODUCTION

Nowadays, many small business owners still use tools like Microsoft Excel or Word to calculate profits, track sales, and manage their daily spending. These tools are easy to start with and quite common, but as the business gets bigger, the work can become messy, confusing, and take up too much time. That's why our group decided to build ezAccount System, it is a simple and friendly accounting system made specially for small businesses. Our goal is to make calculations easier, reduce mistakes, and save time so business owners can focus on what really matters, that's growing their business.

ezAccount System is designed to be affordable and easy to use, even for those without any accounting experience. It helps track income and expenses, and create clear summaries and reports. The system can also automatically show how the business is doing on a weekly, monthly, quarterly, and yearly basis, making it easier to spot trends and make better decisions. With ezAccount System, we want to take the stress out of managing business finances and offer a smoother, more comfortable experience for every small business owner.

1.1 BACKGROUND OF PROJECT

In recent years, many small businesses have continued to rely on basic tools like Microsoft Excel and Word to handle their financial tasks such as calculating profits, tracking sales, and managing daily expenses. While these tools are widely used and easy to access, they are not designed for accounting purposes. As a business grows, using these tools can become inefficient, confusing, and prone to errors, especially for those without an accounting background.

To address this problem, our group is developing ezAccount System, it is a simple, user-friendly, and affordable accounting solution tailored specifically for small businesses. This system aims to help business owners handle their finances more effectively, without the need for complex software or professional accounting knowledge. ezAccount System provides features that allow users to track income and expenses, generate clear financial summaries, and view business performance automatically on a weekly, monthly, quarterly, and yearly basis.

By providing a more organized and comfortable way to manage finances, ezAccount System supports small business owners in making smarter decisions, saving time, and focusing more on running and growing their business.

1.2 PROBLEM STATEMENT

On top of that, many small business owners find it hard to connect their finances with other parts of the business, like inventory, payroll, or customer management. Without everything in one place, they often end up repeating work, keeping inconsistent records, and missing out on useful insights that could help them make better decisions. The problem statements are:

- Many small business owners still rely on Microsoft Excel or Word for accounting tasks, which are not designed for efficient financial management.
- As the business grows, using manual tools becomes messy, time-consuming, and increases the risk of calculation errors.
- Business owners without accounting knowledge struggle to understand their business performance due to a lack of clear and automated reporting tools.

1.3 OBJECTIVES

To develop ezAccount System, a user-friendly and affordable accounting tool that helps small business owners manage their finances more efficiently and gain better insights into their business performance. In fact, the objectives of ezAccount System are:

- i.** To make it easier for small business owners to move away from Microsoft Excel or Word by offering a simple system that helps them track their finances in one place.
- ii.** To save time and avoid common calculation mistakes by letting the system handle things like adding up income, tracking expenses, and generating reports automatically.
- iii.** To help business owners clearly understand how their business is doing by showing easy-to-read reports every week, month, quarter, and year.

1.4 SCOPE

1.4.1 System Scope

i. Business Owner:

- Add and manage supplier details, item descriptions, prices, and stock quantities.
- View and search all past transaction records.
- Generate financial summaries on a monthly, quarterly, or yearly basis.
- Create and manage sales and transaction records for business tracking.

ii. Staff:

- Assist the business owner by managing stock entries when the business owner is not available.
- Add and update stock details such as item names, prices, and quantities.
- Help ensure stock records are always accurate and up to date.

1.4.2 User Scope

i. Business Owner

ii. Staff

1.5 PROJECT SIGNIFICANT/BENEFIT

The ezAccount system is designed to make managing business finances simple and stress-free by replacing manual tools like Excel or Word. It saves time, reduces errors, and automates financial tasks and calculations, so owners can focus on running their business instead of struggling with numbers. With clear, easy-to-understand reports, business owners can track performance and make smarter decisions with confidence. Real-time data adds transparency and keeps them in control of their finances at all times. Plus, the system is built to grow with the business, offering scalable features that adapt as needs change.

The ezAccount system also provides flexibility and accessibility, making it suitable for small business owners with different levels of technical or financial knowledge. Its user-friendly design ensures that even those without an accounting background can easily navigate the system, reducing the learning curve and eliminating the need for costly training. By integrating essential features like expense tracking, closing sales, stock updates, and profit and loss statement into one centralized platform, it helps business owners keep everything organized in a seamless way. This not only improves day-to-day efficiency but also builds confidence in financial decision-making, giving small businesses a strong foundation to grow sustainably.

1.6 SUMMARY

Many small business owners still rely on tools like Microsoft Excel or Word to manage their finances, but as their business grows, these methods often become messy, time-consuming, and prone to errors. That's why our group created ezAccount System, a simple, friendly, and affordable accounting solution designed specifically for small businesses. It's built to take the stress out of financial management, even for those without any accounting background, so owners can spend less time struggling with numbers and more time growing their business.

With ezAccount System, business owners can easily track income, expenses, and stock, while also generating clear financial summaries and reports. The system automatically updates performance insights on a weekly, monthly, quarterly, and yearly basis, making it easier to spot trends and understand the bigger picture. Business owners can also store transaction histories, manage suppliers, and keep stock records organized, while staff members can help update inventory when needed—ensuring everything stays accurate and up to date.

The biggest benefit of ezAccount System is that it simplifies financial tasks while improving accuracy and efficiency. Automated calculations and real-time reports reduce mistakes, save valuable time, and give business owners confidence in making smarter decisions. Plus, the system is scalable, meaning it can grow alongside the business. Ultimately, ezAccount System is not just a tool—it's a supportive partner that helps small business owners stay in control of their finances and focus on what truly matters: running and expanding their business.

CHAPTER 2

LITERATURE REVIEW

2.1 INTRODUCTION

This chapter explores the existing financial management and accounting systems currently available in the market, with a particular focus on how they serve the needs of small businesses. It provides an overview of their key features, capabilities, and strengths in helping business owners manage their finances more efficiently, track expenses, and maintain accurate records. Additionally, the chapter critically examines the limitations and challenges these systems face such as issues related to affordability, user-friendliness, and scalability by offering insights into areas where future solutions can be enhanced. By understanding both the benefits and shortcomings of current systems, this chapter aims to provide a foundation for developing more effective, accessible, and innovative financial management tools tailored to the needs of small and medium enterprises.

2.2 CONCEPT OF STUDY

This chapter discusses several studies related to financial management and accounting systems, focusing on areas such as system design, database structure, user interface, and programming languages. Based on the reviewed research, an effective accounting system should be able to record, process, and monitor financial data — including income, expenses, assets, and liabilities — in an accurate and organized way. Different studies used various technologies to achieve this, but after some online research, this project decided to use PHP, HTML, CSS, JavaScript and MySQL for developing the ezAccount System. These technologies were chosen because they are easy to use, affordable, and well-supported. The system will also include user-friendly interfaces such as web dashboards and financial report pages to help users view and manage their data more conveniently.

Many of the systems reviewed feature modules that handle essential accounting functions, such as tracking transactions, managing invoices, and generating financial summaries. To keep things simple and practical, this project will focus on core modules like daily sales tracking, report profit and loss generation, and user authentication. These functions are designed to make financial management easier for small business owners while ensuring data security and reliability.

Although there are many financial management software options available in the market, most are either too complicated or too expensive for small businesses. The ezAccount System aims to fill this gap by offering a simple, affordable, and easy-to-use solution that caters specifically to small and medium enterprises.

Instead of using complex cloud setups or costly enterprise platforms, this project will use local hosting with XAMPP and PHP-MySQL integration. This approach makes the system more accessible and manageable, especially for users with limited technical skills. The web-based interface allows users to access their financial information anytime and anywhere, making ezAccount System a convenient and reliable tool for modern small business management.

2.3 COMPARISONS OF OTHER WEBSITE

2.3.1 Bukku Accounting

Bukku Accounting is a Malaysian cloud-based accounting platform developed for small and medium-sized enterprises (SMEs). Figure 2.1.1.1 shows the main interface of Bukku Accounting. It offers an accessible way for businesses to manage their financial records online without needing to install any complex software. The login interface is clean and intuitive, allowing business owners and accountants to easily access their financial data from anywhere with an internet connection.

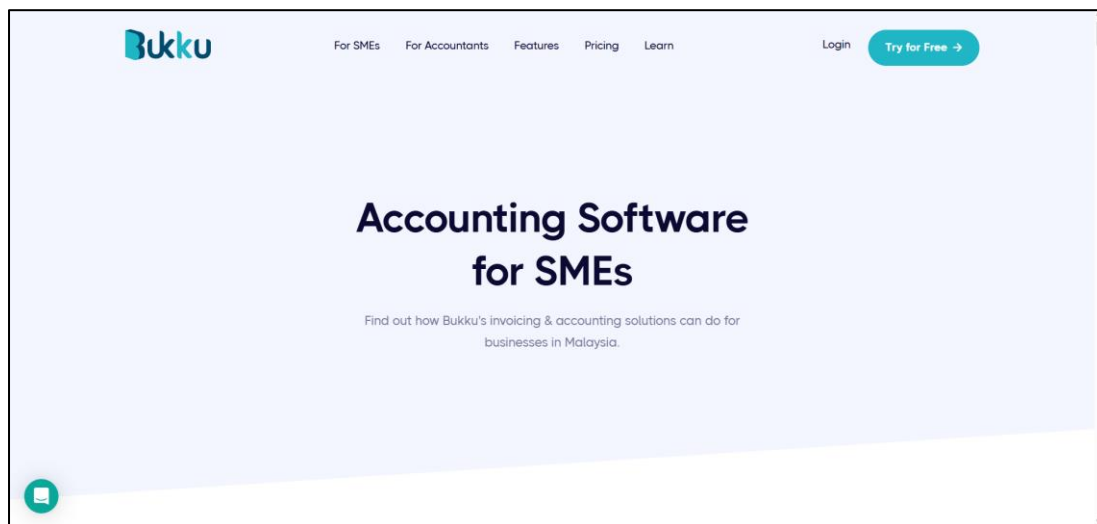

Figure 2.3.1.1: *Bukku Account Main Interface*

Once logged in, users can explore a range of modules designed to support day-to-day accounting tasks. These include invoice generation, expense tracking, bank reconciliation, and financial reporting. With its user-friendly design and centralized online access, Bukku helps streamline accounting processes, making it easier for SMEs to stay organized and focus more on growing their business.

Website Link: <https://bukku.my/bukku-for-smes>

2.3.2 Financio Accounting

Financio is a cloud-based accounting platform specifically built for micro and small businesses in Southeast Asia. Figure 2.3.2.1 shows the main interface of Financio Accounting. It offers a modern and easy-to-navigate web interface that allows users to manage their accounts anytime and from anywhere with internet access. The login page is clean and mobile-friendly, providing fast access to essential accounting tools without requiring any software installation.

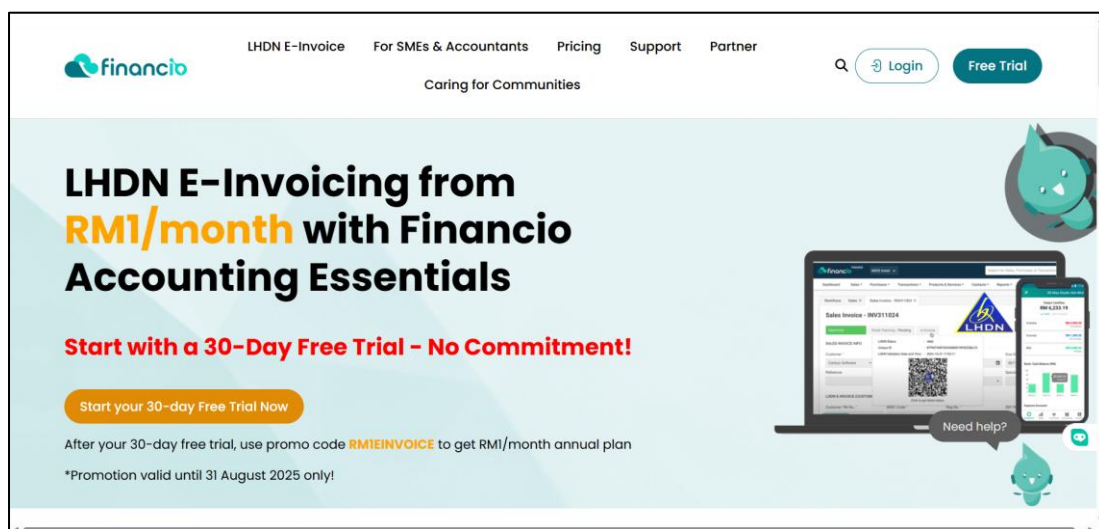

Figure 2.3.2.1: Financio Accounting Main Interface

Once logged in, Financio provides features like e-invoicing, expense tracking, bank reconciliation, GST-ready reports, and multilingual support. It simplifies daily accounting tasks with automation and built-in guides, making it user-friendly even for non-accountants. As a web-based system, it ensures that all data is stored securely in the cloud, and updates are managed automatically, reducing the need for manual maintenance.

Website Link: <https://financio.co>

2.3.3 Xero Accounting

Xero is a well-known cloud accounting platform trusted by small and medium-sized enterprises worldwide. Figure 2.3.3.1 shows the main interface of Xero Accounting. Its interface is browser-based and designed to work seamlessly across devices, allowing users to access financial data on the go. The login screen reflects its professional and global branding, making it clear that users are entering a full-featured financial environment.

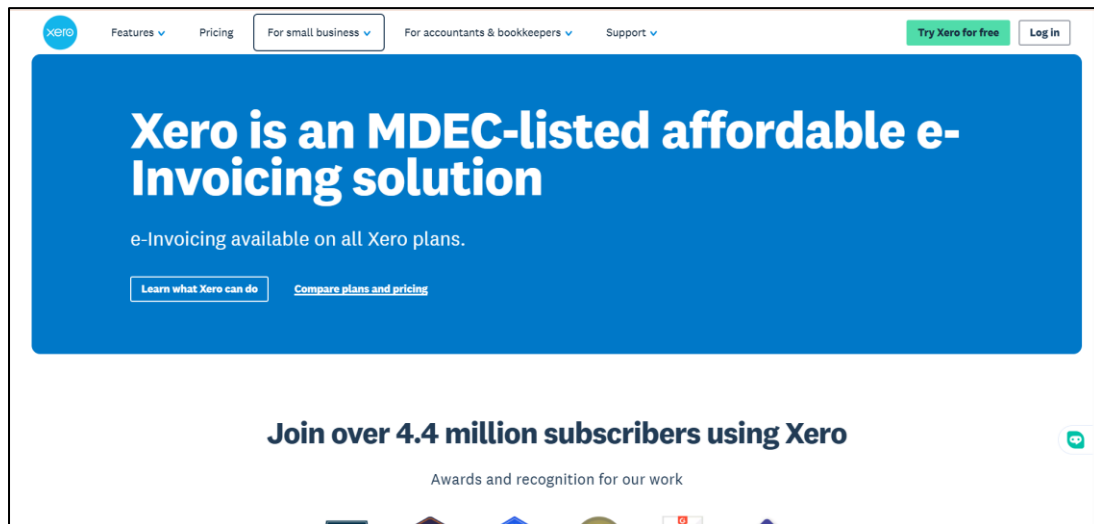

Figure 2.3.3.1: Xero Accounting Main Interface

Inside the platform, Xero supports a wide range of functions such as invoicing, payroll, real-time bank feeds, inventory tracking, and financial reporting. It also integrates with hundreds of business apps, giving users flexibility in managing operations. Its cloud infrastructure ensures secure storage, fast performance, and real-time collaboration between business owners and accountants, making it highly efficient for businesses of all sizes.

Website Link: <https://www.xero.com>

Table 2.1 shows that each accounting system targets different users. Bukku suits local SMEs with essential, affordable features; Financio focuses on small businesses with simple, user-friendly tools and a free plan; Xero serves SMEs and larger companies with advanced, scalable features. Overall, Bukku emphasizes affordability, Financio simplicity, and Xero global reach.

Table 2.1: Comparison Of Several Website Characteristics

NO	CHARACTERISTICS	Bukku Accounting	Financio Accounting	Xero Accounting
1.	Target Users	SMEs and Accountants	Micro and Small Businesses	SMEs and Accountants
2.	Key Features	Bookkeeping, Reports, Bank Reconciliation	Auto-journal entries, Tax, Invoicing	Invoicing, Inventory, Payroll, Bank Feeds
3.	Accessibility	Accessible from browser	Web, Android, iOS	Web, Android, iOS
4.	User Interface	Simple and Localized	Modern and Friendly	Sleek and Professional
5.	Pricing (Basic plan)	Affordable for SMEs	Free (Basic), Paid Plans Available	Paid plans only
6.	Scalability	Good for growing local SMEs	Best for micro to small businesses	Very scalable for global SMEs and larger companies

2.4 SUMMARY

In summary, this chapter provides a detailed look at current financial management and accounting systems, focusing on how they help small and medium-sized businesses manage their finances. It discusses both the strengths and weaknesses of existing solutions, highlighting the importance of having systems that are affordable, easy to use, and flexible enough to grow with a business. By comparing popular platforms such as Bukku, Financio, and Xero, the study shows that while these systems offer useful features like bookkeeping, invoicing, and financial reporting, many are still too expensive or complicated for smaller businesses. To overcome these challenges, the ezAccount System was developed using PHP and MySQL, chosen for their simplicity, affordability, and strong community support. With its web-based design and local hosting setup, ezAccount provides a practical, efficient, and budget-friendly solution to help small business owners manage their finances more effectively and with greater ease.

CHAPTER 3

METHODOLOGY

3.1 INTRODUCTION

The Agile model is a development approach that focuses on flexibility, speed, and user involvement. Instead of waiting until the entire system is complete, Agile breaks the work into smaller steps called sprints. Figure 3.1 shows the Agile methodology diagram. Each sprint delivers a usable part of the system, so important features can be tested and used earlier. This step-by-step process not only speeds up progress but also reduces the risk of big mistakes, since issues can be detected and fixed quickly. Another advantage of Agile is how easy it is to adapt to changes. If users or administrators suggest new ideas, improvements can be added smoothly without having to start the project all over again.

Agile also ensures that the system is always built with the user in mind. Because feedback is collected regularly from users and stakeholders, the system can continuously evolve to match real needs. This makes the end product more practical, user-friendly, and reliable for daily use. By involving users throughout the development process, the gap between what developers create and what users actually need is greatly reduced. In short, Agile provides a more dynamic, responsive, and efficient way of building systems, making it the best choice for projects that require flexibility and continuous improvement.

Another key strength of Agile is its ability to promote teamwork and clear communication. Developers, users, and stakeholders work closely together throughout the process, which builds trust and ensures everyone is on the same page. Regular meetings and updates keep the project transparent, so problems can be identified early and solutions can be discussed openly. This collaborative environment not only improves the quality of the system but also makes the development process smoother and more efficient. By encouraging cooperation, Agile helps ensure that the final system is well-built, timely, and meets the goals of both users and the organization.

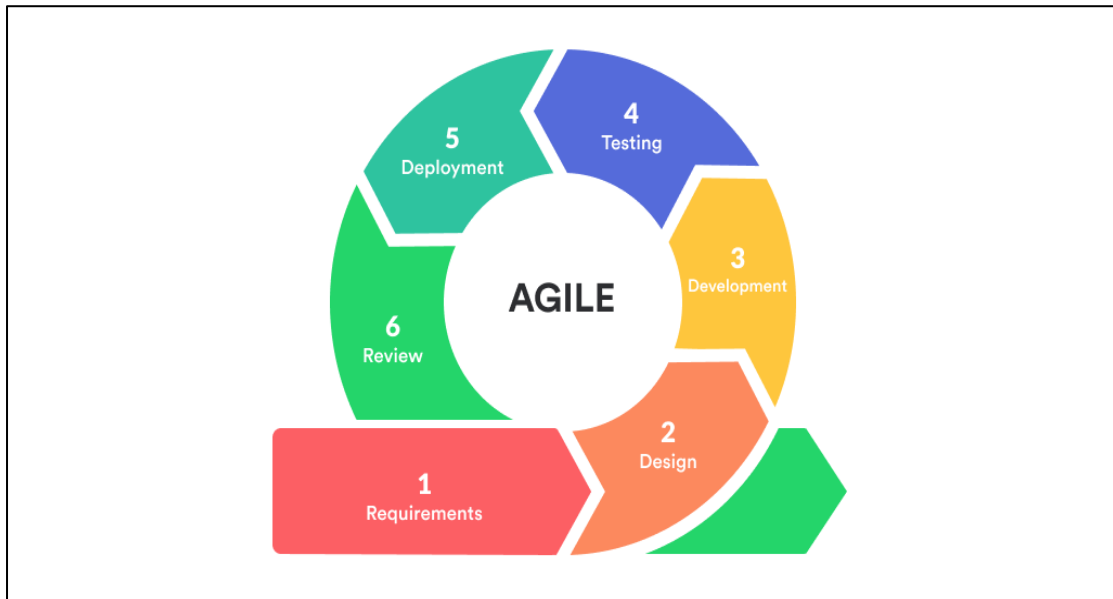

Figure 3.1: Agile methodology diagram

3.2 REQUIREMENTS

The first phase begins with gathering requirements, where the team works interview with client, BIJI KUPI owner to find out the problem. Key requirements might be income and expense tracking, financial summaries, and stock management. The team also determines priorities, defines system goals, and collects user expectations. This ensures the project starts with a clear understanding of what the system needs to deliver.

3.3 DESIGN

In the design phase, the system layout, interface, and database structures are carefully prepared. The goal is to ensure that the system is simple, well-organized, and easy to use for small business owners. This includes designing clear dashboards, input forms, and report layouts while also making sure the database can store and manage data effectively.

3.4 DEVELOPMENT

The development phase focuses on building the system features step by step through short iterations. For example, the team may first develop the stock in and out and daily sales module, test it, and then move on to financial reports. Each part of the system is built and tested before moving forward, reducing errors and ensuring stability throughout the process.

3.5 TESTING

Once the features are developed, the testing phase is carried out to check for any calculation mistakes, formatting issues, or usability problems. This stage ensures that the system is accurate, reliable, and user-friendly. It is especially important because many small business owners using the system may not have accounting knowledge. After the development stage, we invited our client to test and run the system to evaluate its performance and usability. Upon completing the testing session, the client was asked to answer a questionnaire to provide feedback on their experience with the system (refer to Appendix C).

3.6 DEPLOYMENT

After successful testing, the system moves into the deployment phase, where a working version is released for real users such as business owners, and staff. This early release allows them to use the system in their daily operations, providing a practical test of how the system performs in real-world conditions.

3.7 REVIEW & FEEDBACK

Following deployment, the team gathers feedback from users to understand their experiences with the system. Business owners may suggest improvements such as clearer reports, faster data entry, or easier ways to manage stock. This stage is essential because it reflects how the system actually supports business activities.

3.8 ITERATION

In the iteration phase, the team refines and improves the system based on the feedback received. This could mean enhancing existing features, fixing weaknesses, or adding new functions requested by users. After improvements, the system goes through testing and deployment again, continuing the Agile cycle until the system fully meets the needs of small business owners.

3.9 SUMMARY

In summary, this chapter explains how the Agile development model was applied to build the ezAccount System. Agile emphasizes flexibility, teamwork, and continuous improvement, allowing the system to be developed step by step through short sprints. Each phase—from requirement gathering to testing and feedback—ensures the system meets user needs. Regular input from small business owners helps make ezAccount more practical, user-friendly, and reliable, continuously improving to address real business challenges.

CHAPTER 4

REQUIREMENT SPECIFICATIONS

4.1 FUNCTIONAL REQUIREMENT

The functional requirements describe what the ezAccount System must be able to do to meet the needs of small business owners and staff users:

1. System should automatically calculate total income, expenses, and profits.
2. System should store all data securely in a connected MySQL database.
3. System must provide data backup and recovery options.
4. System should generate printable and downloadable reports in PDF or Excel format.
5. System must display error or success messages during data entry and transactions.

4.2 NON-FUNCTIONAL REQUIREMENT

The non-functional requirements define how the ezAccount System performs and ensures quality, security, and usability.

1. Performance

The **ezAccount System** is designed to deliver fast and efficient performance, ensuring that page load and data processes complete within just a few seconds. It can handle multiple user actions at the same time without lag, providing a smooth and responsive experience for every user. The system is optimized through streamlined database queries and a lightweight code architecture, reducing server load and improving overall responsiveness. Additionally, it includes performance monitoring and optimization tools that help detect, analyze, and resolve potential bottlenecks, ensuring consistent stability and reliability even during peak usage periods.

2. Security

To keep user information safe, all passwords will be securely encrypted before being stored in the database. In addition, business owner registration will include multi-factor authentication through Gmail verification, adding an extra layer of protection against unauthorized access and keeping financial data secure.

3. Usability

The system's interface will be clean, simple, and easy to use, even for those without accounting knowledge. Helpful prompts, tooltips, and validation messages will guide users step by step, making every process straightforward and reducing the chance of mistakes.

4. Reliability

The ezAccount System aims to be reliable and always available, with minimal downtime. In case of unexpected issues or errors, it will recover quickly to maintain smooth operation and ensure users can continue managing their financial activities without interruption.

4.3 HARDWARE REQUIREMENT

Table 4.3.1 outlines the hardware requirements needed for the project, with three different laptop models suggested based on performance and cost. The Acer Predator Helios Neo 16, priced at RM6,000, is the most powerful option with an Intel Core i7 processor, NVIDIA RTX4060 GPU, and 32GB DDR5 RAM—suitable for heavy processing tasks. The Huawei Mate 15, at RM3,000, offers a more affordable choice with an Intel Core i3 processor and 8GB RAM, making it practical for lighter usage. Meanwhile, the Dell Latitude 7480, priced at RM1,600, provides a budget-friendly option with decent specifications for basic operations. Overall, the total estimated cost for the hardware is RM10,600, covering different needs from high-performance to cost-efficient setups.

Table 4.3.1: Hardware Requirement

Specification	Description	Cost (RM)
Model	i. -Acer Predator Helios Neo 16 ii. -Huawei Mate 15 iii. -Dell Latitude 7480	6,000.00 3,000.00 1,600.00
Processor	i. INTEL Core i7-14700HX ii. INTEL Core i3-10110U iii. INTEL Core i5-8350U	In Package
GPU (Graphical Processing Unit)	i. NVIDIA GeForce RTX4060 ii. INTEL(R) UHD Graphics iii. INTEL(R) UHD Graphics 620	In Package
RAM (Random Access Memory)	i. 32GB DDR5 5600Mhz ii. 8GB DDR4 2400Mhz iii. 16GB DDR4 2133Mhz	In Package
Operating System	i. Windows 11 Pro ii. Windows 11 Home iii. Windows 11 Pro	In Package
TOTAL PRICE		10,600.00

Table 4.3.2 outline the project's cost planning is designed to cover all essential expenses. The domain and hosting are estimated at RM90, while banners and posters are allocated RM250 for promotional purposes. Preparing the report is expected to cost RM60, and internet usage is budgeted at RM200. Booth decoration requires RM100 to create an appealing setup, and petrol for transportation is planned at RM50. The total estimated cost for all these items amounts to RM750.

Table 4.3.2: Cost Planning

Number	Item	Amount (RM)
1	Domain + Hosting	90.00
2	Banner, poster, brochure	120.00
3	Report	60.00
4	Internet	200.00
TOTAL		700.00

4.4 SOFTWARE REQUIREMENT

To successfully develop and run the ezAccount System, certain software is required. These tools and platforms are important because they help the development team to build the system, test it, and make sure it works properly for end users. The software requirements include the operating system, programming language, database, and other supportive tools that ensure the project can be developed smoothly and maintained in the future. Each software chosen has been carefully considered to match the scope of the ezAccount System, which focuses on account management, record keeping, and easy user interaction.

Table 4.4.1 lists the software needed for the ezAccount System, covering development, database management, design, documentation, presentation, collaboration, testing, and security. Tools like Visual Studio Code and Domain Hosting support coding, data storage, and local testing, while StarUML and Pencil help with system and UI design. Microsoft Word and PowerPoint aid documentation and presentations, cloud storage ensures file safety, and browsers, antivirus, and optional Python support testing, security, and future automation needs.

Table 4.4.1: *Software Requirements for ezAccount System*

Software	Category	Purpose / Why Needed
1. Visual Studio Code	IDE (Integrated Development Environment)	To write, debug, and manage the source code for the ezAccount System. It provides an easy environment to code using web technologies like HTML, CSS, JavaScript, and backend languages such as PHP or C#. It also helps detect and fix errors quickly.
2. StarUML	Modeling & Diagram Tool	To design system diagrams such as use case, class, and sequence diagrams. This helps the team plan the system clearly and explain the workflow in a visual way that is easier to understand.
3. Microsoft Word	Documentation Tool	To prepare documents such as the project proposal, reports, and user manual. It ensures all written parts of the project are neat and professional.
4. Canva	Presentation Tool	To create slides for proposal defense, progress meetings, and final presentation. It helps explain the project ideas and results clearly to lecturers and evaluators.

6. Domain Hosting	Domain Hosting	To make the website accessible online by storing all web files and connecting them to a registered domain name.
7. Browsers (Google Chrome, Edge, Firefox)	Testing Tool	To check if the ezAccount System works properly across different browsers. This ensures all users can access the system smoothly, no matter which browser they use.

4.5 SECURITY REQUIREMENT

4.5.1. Password required when login

In the ezAccount System, users need to enter a password when logging in to keep their accounts safe and private. This helps make sure that only the rightful owner can view or manage their financial information. It's an important step to protect personal data and maintain trust by keeping everything secure.

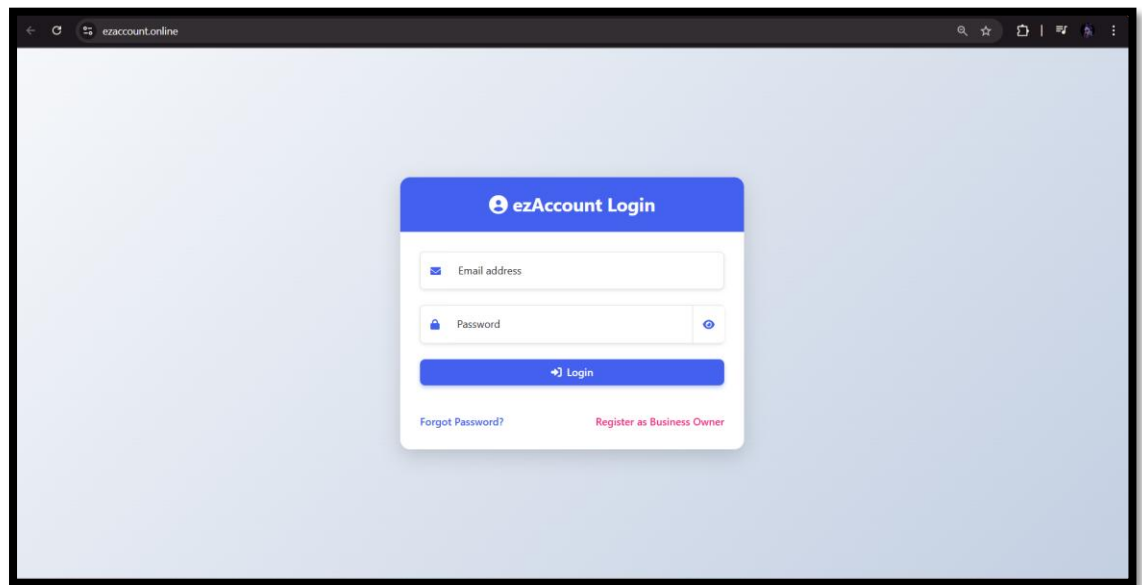

Figure 4.5.1.1: Login Page of ezAccount System

4.5.2. Multi-factor authentication

When registering as a business owner in the **ezAccount System**, users will go through multi-factor authentication using a Gmail verification code. This extra step helps confirm the user's identity and ensures that the account truly belongs to them. It adds an extra layer of protection, keeping business information safe and secure from unauthorized access.

Figure 4.5.2.1: Business Owner Authentication by Verification Code

4.6 SUMMARY

The ezAccount System is designed to be a secure, efficient, and easy-to-use financial management tool for small business owners and their staff. It offers key features such as automatic income and expense calculations, secure MySQL data storage, data backups, report generation, and clear feedback during transactions. To maintain quality, the system focuses on fast performance, strong data encryption, Gmail-based multi-factor authentication, and a simple, reliable interface that anyone can navigate. The project uses three different laptop models to balance performance and cost, with a total estimated hardware cost of RM10,600, while essential project expenses such as domain hosting, reports, and promotion materials amount to RM700. Various software tools, including Visual Studio Code, StarUML, Microsoft Word, Canva, and web browsers, support development, design, and testing. With strong security measures like password protection and Gmail verification, the ezAccount System ensures that all user and financial data remain safe, private, and accessible only to authorized users.

CHAPTER 5

FINDING AND DISCUSSION

5.1 INTRODUCTION

This chapter presents the findings and discussion on the overall performance and effectiveness of the system. Software testing was conducted to evaluate the system's quality, reliability, and functionality. It helps identify and resolve defects early in the development process, ensuring a more stable system and delivering a satisfying user experience.

5.2 USER ACCEPTANCE TEST (UAT)

The User Acceptance Test (UAT) was carried out to see how well the **ezAccount System** meets the real needs and expectations of its users. It aimed to ensure that every feature works as intended and that users can comfortably navigate and interact with the system in everyday use. During the testing, participants tried out key functions such as manage stock, closing sales, operating expenses, generate PDF profit and loss statement and exploring the interface. Their feedback was incredibly helpful in highlighting what worked well and what could be improved. Overall, the results showed that **ezAccount** is reliable, easy to use, and efficient—making financial management simpler, faster, and more convenient for users, and proving that the system is ready for real-world use.

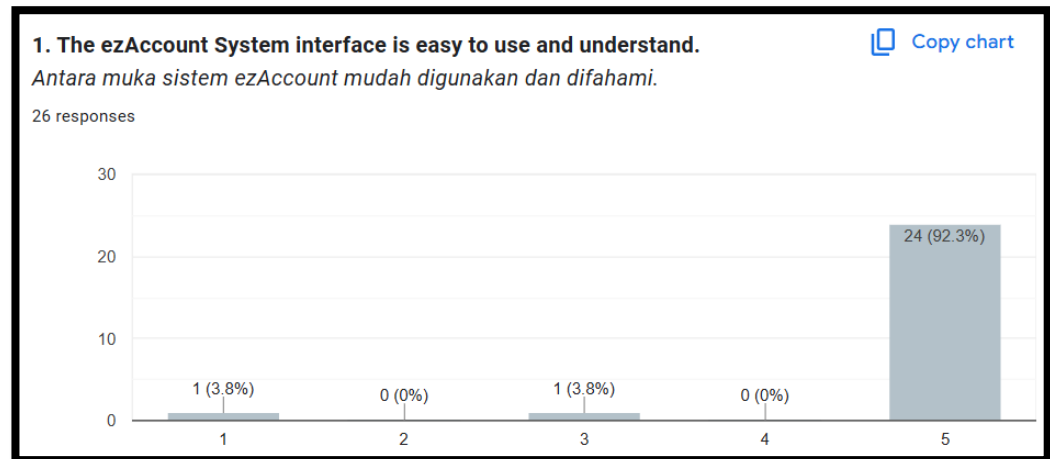

Figure 5.2.1 Users find the ezAccount interface clear and easy to use.

According to Figure 5.1, the overwhelming majority of users, 92.3%, strongly agreed that the ezAccount System interface is easy to use and understand. A small percentage, 3.8%, were neutral, while 3.8% users disagreed with the statement. This indicates a very high level of user satisfaction with the system's interface usability.

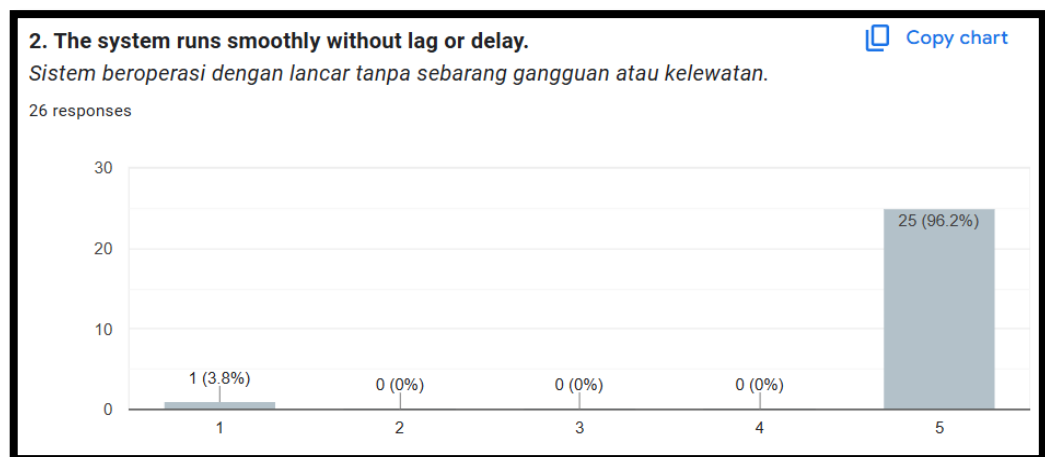

Figure 5.2.2 Users experience a fast and fluid system performance.

According to Figure 5.2, an overwhelming 96.2% of users strongly agreed that the system runs smoothly without any lag or delay. A very small minority, 3.8%, slightly disagreed. This indicates an exceptionally high level of user satisfaction with the system's performance and responsiveness.

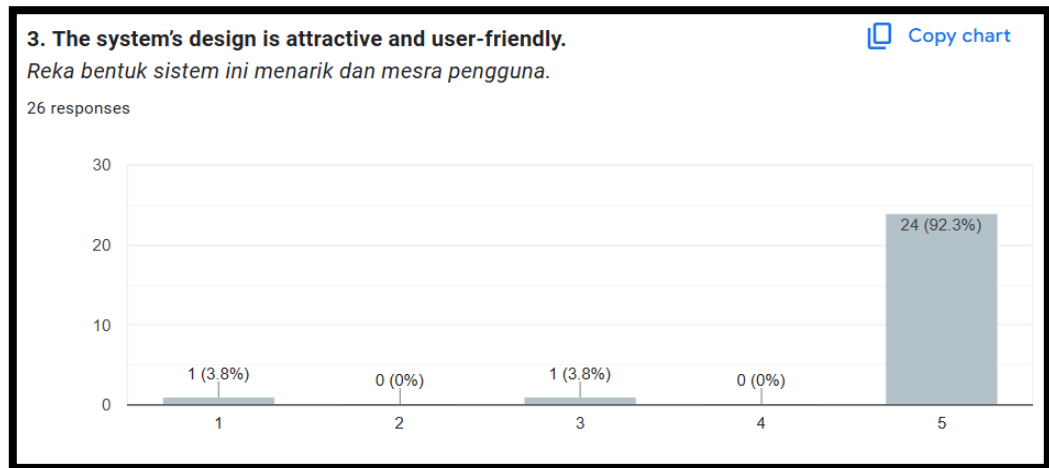

Figure 5.2.3 The design is both visually engaging and optimized for user experience.

Refer to Figure 5.3 indicates an overwhelmingly positive user reception of the system's design. A significant majority of 92.3% strongly agreed that the design is attractive and user-friendly. A small number of users were neutral or strongly disagree, confirming that the system's aesthetic and usability are highly successful.

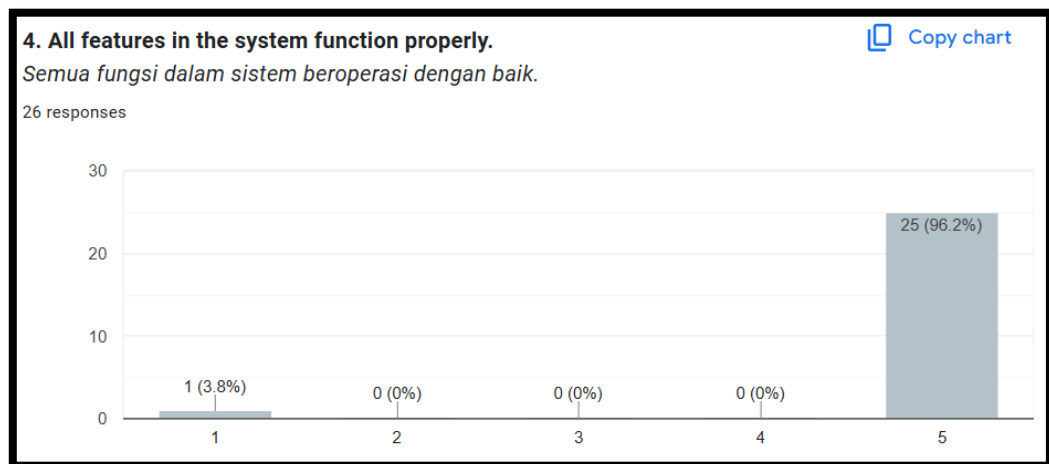

Figure 5.2.4 Satisfaction of User on system function well.

Based on Figure 5.4 demonstrates exceptional system reliability. An overwhelming 96.2% of users strongly agreed that all features in the system function properly. A very small minority (3.8%) strongly disagree, while no users were neutral or reported any disagreement. This indicates a near-universal consensus on the system's functional robustness and operational correctness.

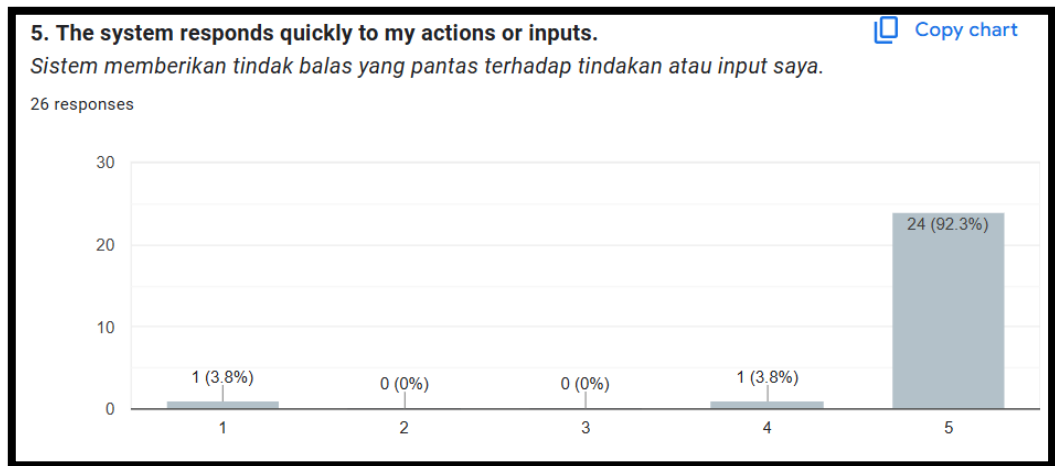

Figure 5.2.5 Satisfaction of User on system responsiveness.

According to Figure 5.5, user satisfaction with the system's responsiveness is exceptionally high. A significant majority of 92.3% of strongly agreed that the system responds quickly to their actions or inputs. A small portion of users (3.8%) were in slight agreement, while no users were neutral or expressed disagreement. This indicates that the system's performance in processing user commands is highly effective and meets user expectations.

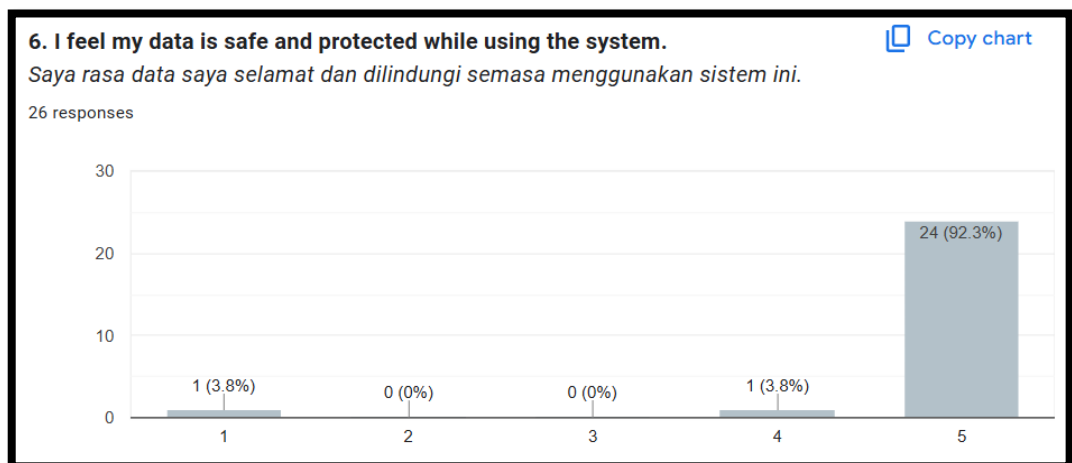

Figure 5.2.6 User feel their data are safely secured.

Refer Figure 5.6, users have an extremely high level of confidence in the system's data security. An overwhelming 92.3% of respondents strongly agreed that they feel

their data is safe and protected while using the system. A very small minority (3.8%) slightly agreed, and no users were neutral. This indicates that the system successfully fosters a strong sense of trust and security among its users.

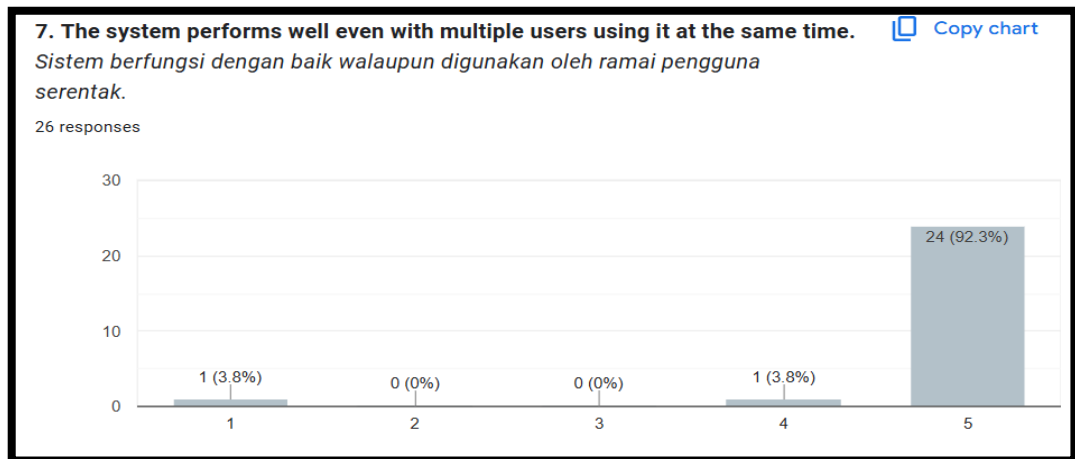

Figure 5.2.7 Satisfaction of User system performance

Based on Figure 5.7, user satisfaction with the system's performance under concurrent use is exceptionally high. A significant majority of 92.3% of respondents strongly agreed that the system performs well even with multiple users accessing it simultaneously. A small portion of users (7.6%) expressed slight agreement, while no users were neutral or disagreed. This indicates that the system maintains strong stability and responsiveness during periods of high demand.

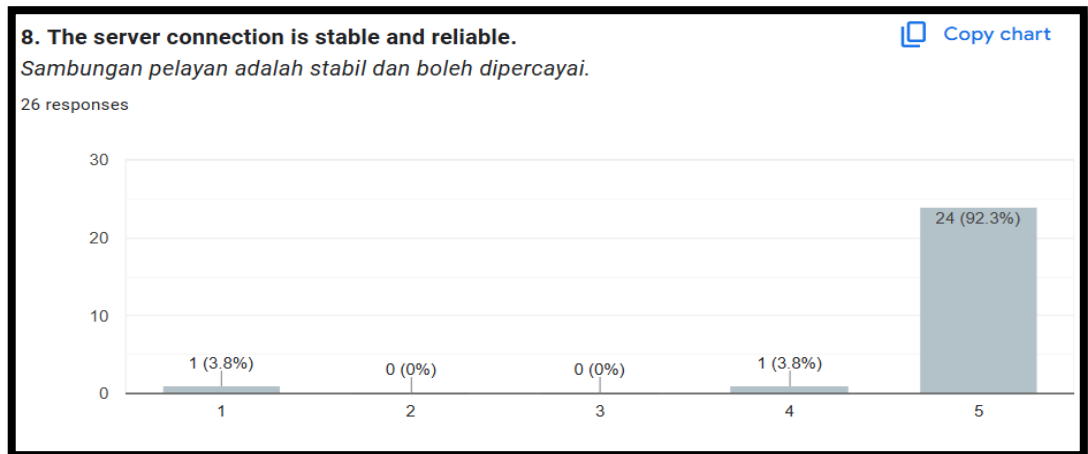

Figure 5.2.8 Satisfaction of User server connection is strong.

Refer to Figure 5.8, user satisfaction with the server connection's stability and reliability is extremely high. An overwhelming majority of 92.3% of respondents strongly agreed that the server connection is stable and reliable. A small minority (7.6%) were in slight agreement, while no users expressed neutral or negative opinions. This indicates that the system's backend infrastructure provides a highly dependable and consistent user experience.

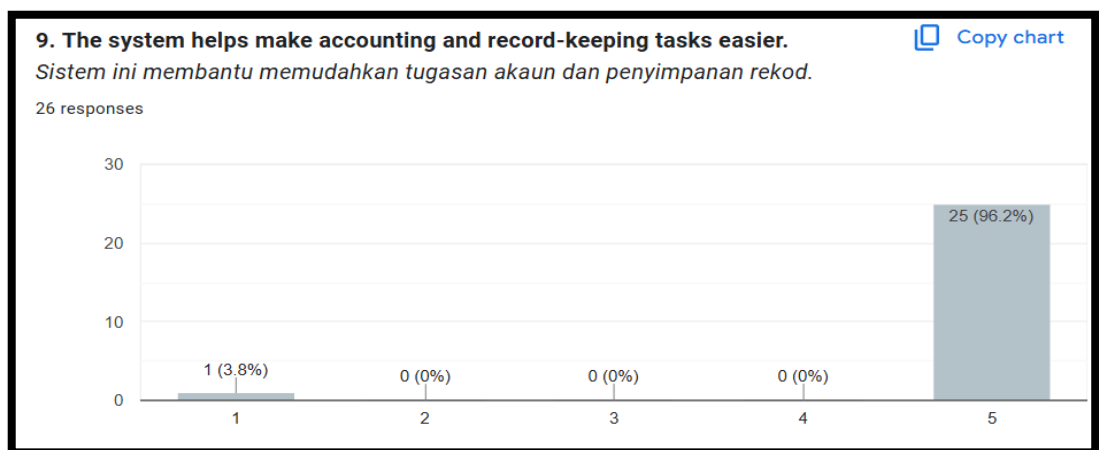

Figure 5.2.9 Satisfaction of User managing tasks in easy way.

According to Figure 5.9, the system is highly effective at simplifying accounting and record-keeping tasks. An overwhelming 96.2% of users strongly agreed with this

statement. A very small minority (3.8%) slightly agreed, while no users were neutral or disagreed. This indicates that the system successfully achieves its core objective of streamlining financial administrative work for its users.

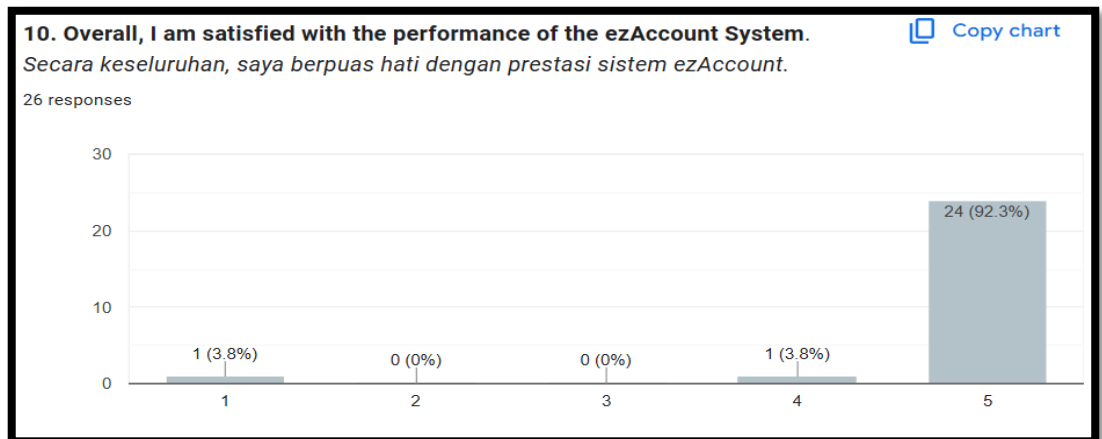

Figure 5.2.10 User satisfy overall performance of the system.

Refer to Figure 5.10, the overall user satisfaction with the ezAccount System's performance is exceptionally high. A dominant majority of 92.3% of respondents expressed strong agreement with their satisfaction. A small minority (7.6%) were in slight agreement, while no users were neutral or dissatisfied. This result confirms that the system successfully meets user expectations and delivers a positive overall experience.

5.3 ADVANTAGES OF ezAccount SYSTEM

5.3.1 Enhanced Accessibility and Cross-Platform Compatibility

The ezAccount System is designed to fit today's fast-paced, connected world. With its cloud-based hosting and responsive design, users can access it anytime, anywhere whether on a smartphone, tablet, or computer. This means business owners and their teams can update records, manage finances, and check real-time reports even while on the move. Its flexibility not only supports modern, mobile business operations but also encourages easy collaboration, making financial management smoother and more convenient than ever.

5.3.2 Cost-Effective with Advanced Cloud Benefits

ezAccount offers the power of cloud technology without the hefty price tag. By running on the cloud, it removes the need for costly hardware and server maintenance, helping small businesses save on IT expenses. Despite its affordability, it still delivers the reliability, accessibility, and security expected from professional accounting software. With automated reporting and safe data storage, ezAccount makes advanced financial management tools accessible to businesses of all sizes.

5.3.3 Automation and User-Centric Design

Managing finances doesn't have to be complicated. ezAccount automates time-consuming accounting processes such as manage stock, closing sales, operating expenses and profit and loss statement so users can focus on running their business instead of crunching numbers. It is simple, user-friendly interface, praised with a 92.3% satisfaction rate, allows even those without accounting experience to navigate easily and work confidently. The result is a system that saves time, reduces errors, and makes managing finances faster, easier, and more accurate.

5.4 DISADVANTAGES OF ezAccount SYSTEM

5.4.1 Dependence on Stable Internet Connectivity

The ezAccount is fully cloud-based, it relies on a steady internet connection to function properly. In areas with weak or unstable networks, users may struggle to access the system or complete important financial tasks. During internet outages, business operations such as updating records or generating reports can be delayed, which can be frustrating—especially when quick decisions are needed. Unlike offline software, ezAccount cannot be used without an internet connection, making network stability a key requirement for smooth operation.

5.4.2 Limited Advanced and Integrated Features

ezAccount is designed with simplicity in mind, focusing on the essential tools most small businesses need. However, as companies grow, they may eventually need more advanced capabilities—such as automated bank synchronization, payroll processing, or integration with CRM and tax systems. Since these features are not yet available, users with expanding business needs might find the system limiting over time and may have to consider upgrading to a more feature-rich (and often more expensive) platform.

5.4.3 Ongoing Security Responsibilities of Cloud Hosting

Hosting data in the cloud brings convenience but also added responsibility. Although ezAccount includes safeguards like password protection and Gmail verification, its security still depends partly on the cloud provider's infrastructure. This means the system must remain alert to online threats such as hacking attempts, data breaches, or denial-of-service attacks. Continuous monitoring and updates are essential to keep data safe, but maintaining this level of protection can be challenging and may extend beyond what the core development team can control directly.

5.5 SUMMARY

This chapter discusses the findings and discussion of the ezAccount System's performance and effectiveness based on user testing and evaluation. The User Acceptance Test (UAT) results revealed that users found the system highly reliable, user-friendly, and efficient, with over 90% expressing strong satisfaction across areas such as interface design, speed, functionality, and data security. The system's main advantages include its accessibility across multiple devices, cost-effectiveness through cloud hosting, and automation features that simplify financial management tasks. However, several limitations were identified, such as dependence on stable internet connectivity, limited advanced integrations, and ongoing cloud security responsibilities. Overall, the findings confirm that ezAccount successfully meets user needs by providing a convenient, affordable, and efficient solution for small business financial management.

CHAPTER 6

CONCLUSION AND RECOMMENDATION

6.1 INTRODUCTION

This chapter presents the conclusion and recommendations for the project, summarizing how the ezAccount System was successfully developed in alignment with the objectives and scope discussed earlier. The system meets the main requirements set for the project, and several improvements were implemented to ensure smooth and efficient operation of the software. Throughout the development process, regular meetings were held with the project supervisor to discuss progress, review updates, and resolve any issues that arose. The supervisor's guidance played an important role in helping to overcome challenges and enhance the project's quality. Lastly, this chapter also provides several recommendations for future improvements to the ezAccount System, focusing on enhancing its functionality, performance, and overall user experience for small business users.

6.2 CONCLUSION

The development of the ezAccount System successfully tackles the real challenges faced by small business owners who have long depended on manual tools like Microsoft Excel to manage their finances. This traditional approach often causes inefficiency, errors, and confusion when trying to understand overall business performance. With that in mind, the project aimed to create a simple, affordable, and user-friendly accounting system that helps business owners track finances easily, automate calculations, and generate clear, useful reports.

Using the Agile methodology during development played a key role in making this project a success. The step-by-step, feedback-driven approach allowed the team to keep improving the system based on user input, ensuring it truly met their needs. Built on a secure PHP-MySQL framework with features like password encryption and Gmail verification, the system offers a reliable and safe platform for small businesses. The User Acceptance Test

(UAT) results showed that over 92% of users strongly agreed on its ease of use, performance, and reliability. It proving that ezAccount works effectively in real business situations.

Overall, the ezAccount System has grown from an idea into a practical, user-approved tool that makes financial management easier and smarter for small business owners. It helps reduce paperwork, saves time, and offers valuable insights for better business decisions. Although it currently depends on an internet connection and focuses mainly on essential features, these areas open opportunities for future improvements. The project has achieved its goals and laid a strong foundation for further development and innovation.

6.3 RECOMMENDATION

To keep the ezAccount System competitive and valuable in the long run, a few thoughtful improvements are recommended. First, enhancing the system's ability to connect with other tools would make it even more useful for growing businesses. For example, adding automated bank feed synchronization could let users import transactions directly, while including simple payroll features and integrating with popular e-commerce or CRM platforms would streamline operations. These upgrades would help reduce repetitive data entry, cut down on errors, and give business owners a more complete, connected financial management experience.

Next, improving the system's analytics and mobile features should be a key focus. By introducing advanced tools like cash flow forecasting, spending trend analysis, and customizable dashboards, users could gain clearer insights into their financial health. Developing a dedicated mobile app—with the ability to work offline—would also make ezAccount more flexible, letting users record transactions and view important data anytime, even without internet access, and sync their information automatically once they're back online.

Lastly, setting up a continuous feedback and improvement process would help ezAccount grow with its users. Creating a feature request portal, collecting regular feedback through surveys, and sharing a public product roadmap would ensure transparency and user-driven progress. Introducing flexible, modular pricing for advanced features could also keep the system affordable for small businesses while supporting ongoing innovation. Together,

these steps would strengthen ezAccount's position as a smart, practical, and evolving solution for modern entrepreneurs.

6.4 PROJECT LIMITATIONS

Despite the successful development of the ezAccount System, there are several limitations that should be acknowledged. First, the system currently operates on local hosting using XAMPP, meaning it can only be accessed from the same device or local network. This limits remote access and collaboration among multiple users at different locations.

Second, the system's design focuses mainly on core financial functions such as transaction tracking, income and expense management, and report generation. Advanced features like automated analytics, tax computation, and multi-user role management have not yet been implemented due to time and resource constraints.

Third, the system relies heavily on manual data entry, which may increase the chance of human error. Integrating automation or data import features from external sources would help minimize this issue in the future.

Additionally, the ezAccount System has been tested on a limited number of users and devices, so further usability and performance testing is needed to ensure it functions consistently across different environments. Finally, since the system does not yet include cloud integration or mobile compatibility, users are restricted to desktop use, which may not be convenient for those who prefer to manage their accounts on the go.

Overall, while these limitations do not affect the system's core functionality, addressing them in future improvements will make the ezAccount System more flexible, efficient, and accessible for small business users.

6.5 SUMMARY

The ezAccount System, while successful in delivering its main goals, still operates within a few clear limitations. The most noticeable is its current focus on basic accounting functions. Features like automated tax calculations, inventory forecasting, multi-currency handling, and detailed audit trails have not yet been added. Because of this, the system may feel limited for larger or fast-growing businesses that require more advanced financial tools.

There are also some technical constraints to consider. Although the system's design is secure and stable, it doesn't yet allow multiple users to edit records simultaneously in real time. Its performance could also slow down when handling very large volumes of data over many years, as it's currently optimized for small to medium-sized businesses. In addition, the lack of a fully developed mobile app makes it less convenient for users who need to access their financial data while on the move.

Lastly, the project's development was shaped by limited time and resources, which affected the scale of testing and deployment. While the User Acceptance Testing (UAT) results were highly positive, the test group consisted of only 26 users meaning some edge cases or unique business scenarios may not have been fully explored. The system has mainly been tested in a few business types, so further testing in different industries would help refine and strengthen its overall performance.

Tuan/Puan,

Penerimaan sebagai Client untuk Pembangunan Projek Pelajar - "ezAccount System"

Merujuk kepada perkara di atas, dengan sukacitanya ingin memaklumkan bahawa saya telah bersetuju untuk menjadi client bagi projek pelajar yang bertajuk "ezAccount System" yang sedang dibangunkan oleh pelajar-pelajar Diploma Digital Teknologi (DDT) di Politeknik Sultan Abdul Halim Mu'adzam Shah.

Kami menyambut baik inisiatif ini dan yakin bahawa projek ini akan memberikan manfaat yang besar kepada kedua-dua pihak. Dengan kerjasama ini, kami berharap dapat memberikan bimbingan yang sewajarnya serta berkongsi pengalaman kami dalam industri ini bagi membantu pelajar-pelajar mencapai hasil yang cemerlang.

Kami berharap agar segala urusan berkaitan projek ini dapat dilaksanakan dengan lancar dan mengikut jadual yang telah ditetapkan. Sebarang pertanyaan atau maklumat lanjut boleh dikemukakan kepada kami melalui maklumat yang tertera di atas.

Kami mengucapkan selamat maju jaya kepada semua pelajar yang terlibat dalam projek ini dan berharap agar projek ini berjaya direalisasikan dengan jayanya.

Sekian, terima kasih.

Yang benar,

AHMAD KHAIRI BIN YAHYA

PEMILIK PERNIAGAAN

Tuan/Puan,

Surat Penghargaan atas Kejayaan Pembangunan Sistem "ezAccount System"

Merujuk kepada projek yang telah dijalankan oleh pelajar-pelajar Diploma Digital Teknologi (DDT) di Politeknik Sultan Abdul Halim Mu'adzam Shah seperti nama diatas, kami di PERNIAGAAN BIJI KOPI HASSANIAN ingin menyampaikan setinggi-tinggi penghargaan di atas kejayaan anda semua dalam membangunkan sistem "ezAccount System."

Kami amat berpuas hati dengan hasil kerja anda, di mana sistem ini telah dibangunkan dengan baik dan memenuhi keperluan yang telah ditetapkan oleh pihak kami. Ini menunjukkan dedikasi dan komitmen anda dalam menjayakan projek ini.

Projek ezAccount System ini telah berjaya disiapkan sepenuhnya dan menepati objektif yang digariskan oleh pihak klien. Kami yakin bahawa sistem ini dapat digunakan dengan berkesan serta memberi manfaat yang besar kepada pengguna dalam menguruskan kewangan dengan lebih mudah dan teratur.

Sekali lagi, kami ingin mengucapkan tahniah kepada anda semua atas kejayaan ini dan berharap agar anda terus berusaha dengan cemerlang dalam bidang yang diceburi. Kami di PERNIAGAAN BIJI KOPI HASSANIAN sentiasa mengalu-alukan kerjasama yang berterusan dengan pelajar-pelajar Politeknik Sultan Abdul Halim Mu'adzam Shah.

Sekian, terima kasih.

Yang benar,

AHMAD KHAIRI BIN YAHYA

A. Personal Information (Maklumat Peribadi)

Please fill in your personal information below. Sila isi maklumat peribadi anda di bawah.

Name / Nama : ahmad khairi xmya

Phone. No / No. Telefon : 010-5524254

Email / E-mel : key4045.ky@gmail.com

B. System Usage Experience (Pengalaman Penggunaan Sistem)

Please fill in the answer based on the questions given. Sila isikan jawapan berdasarkan soalan yang diberikan.

1. Was the overall ezAccount system interface easy to use and user-friendly?
Adakah antara muka sistem ezAccount mudah digunakan dan mesra pengguna (user-friendly) secara keseluruhan? /

Yes / Ya ☒ No / Tidak ☐

2. Did the automatic Profit/Loss calculation feature function accurately as you expected?
Adakah ciri yang mengira Untung/Rugi secara automatik berfungsi dengan tepat seperti yang anda jangkaan?

Yes / Ya ☒ No / Tidak ☐

3. Did the single view of all sales and expenses make reviewing your business performance much easier?
Adakah paparan tunggal untuk melihat semua jualan dan perbelanjaan menjadikan semakan prestasi perniagaan anda jauh lebih mudah?

Yes / Ya ☒ No / Tidak ☐

4. Did the system's security features (e.g., login process, data protection) provide you with sufficient confidence in your financial records?

Adakah ciri keselamatan sistem (cth: proses log masuk, perlindungan data) memberikan anda keyakinan yang mencukupi terhadap rekod kewangan anda?

Yes / Ya

☒

No / Tidak

☐

5. Based on your testing experience, would you recommend this version of the ezAccount system to a colleague or business partner?

Berdasarkan pengalaman ujian anda, adakah anda akan memperkenalkan Sistem ezAccount ini kepada rakan sekerja atau rakan niaga?

Yes / Ya

☒

No / Tidak

☐

6. Are you fully satisfied with the features and functions tested and ready to use this ezAccount System for your business?

Adakah anda berpuas hati sepenuhnya dengan ciri-ciri dan fungsi yang telah diuji serta bersedia untuk menggunakan Sistem ezAccount ini untuk perniagaan anda?

Yes / Ya

☒

No / Tidak

☐

7. Did the system make it easy and efficient to record daily sales, including staff and shift details, under the "New Closing Sales" function?

Adakah sistem menjadikan proses merekodkan jualan harian, termasuk butiran kakitangan dan syif, di bawah fungsi "Penutupan Jualan Baharu" mudah dan cekap?

Yes / Ya

☒

No / Tidak

☐

8. Was the "Cash Breakdown" feature helpful and accurate for reconciling the physical cash in hand with the expected sales total?

Adakah ciri "Pengagihan Tunai" membantu dan tepat untuk menyelaraskan tunai fizikal di tangan dengan jumlah jualan yang dijangkakan?

Yes / Ya

☒

No / Tidak

☐

9. For the "Manage Closing Sales" function, was the filtering option by Outlet, Year, Month, and Day effective for quickly locating past closing records?

Untuk fungsi "Urus Penutupan Jualan," adakah pilihan penapisan mengikut Cawangan (Outlet), Tahun, Bulan, dan Hari berkesan untuk mencari rekod penutupan jualan yang lalu dengan pantas?

Yes / Ya

☒

No / Tidak

☐

10. Was the display of the Difference (Profit/Loss) column in the past closing sales report clear and immediately useful for identifying discrepancies?

Adakah paparan lajur Perbezaan (Untung/Rugi) dalam laporan penutupan jualan lalu jelas dan berguna serta-merta untuk mengenal pasti perbezaan?

Yes / Ya

☒

No / Tidak

☐

C. Marketability and Pricing (Kebolehmampuan Pasaran dan Harga)

11. What is the price range you are willing to pay (one-time payment/annual subscription) to acquire the ezAccount System with the features you have tested?

Berapakah julat harga yang anda sanggup bayar (sekali bayar/langganan setahun) untuk mendapatkan Sistem ezAccount dengan ciri-ciri yang telah diuji?

☐

RM1,000 - RM3,000

☒

RM3,001 - RM5,000

☐

RM5,001 - RM10,000

☐

More than RM10,000 / Lebih dari RM10,000

☐

Please Specify / Sila Nyatakan: _____

D. Suggestions and Additional Feedback (Cadangan dan Maklum Balas Tambahan)

12. What is the single most important improvement or new feature you would recommend for the next update of the ezAccount System?

Apakah penambahbaikan yang paling penting atau ciri-ciri baharu yang anda akan cadangkan untuk disertakan dalam Sistem ezAccount seterusnya?

Create manager view that can edit or create items.

13. Please describe the biggest challenge or issue you encountered when using the recording or report generation functions in the system.

Sila huraikan cabaran atau masalah yang anda hadapi ketika menggunakan fungsi merekod atau menjana laporan dalam sistem ini?

easy to use. No issues

14. Out of all the features you tested, which one was the most useful to you, and why?

Daripada semua ciri yang anda uji, ciri manakah yang paling berguna kepada anda, dan mengapa?

all is useful as tailored to my business need & requirement

15. What additional security measures (e.g., two-factor authentication, passwords) do you feel are necessary to further increase your confidence in the system's security?

Apakah langkah-langkah keselamatan tambahan (cth: pengesahan dua faktor, kata laluan) yang anda rasa perlu ada untuk meningkatkan lagi keyakinan anda terhadap keselamatan sistem?

in future new upgrade versions.

16. Regarding the daily sales closing process, what is the single biggest pain point or suggestion you have for improving this feature (e.g., speed, data entry, reconciliation)?

Berkenaan dengan proses penutupan jualan harian, apakah satu masalah atau cadangan terbesar yang anda ada untuk menambah baik ciri ini (cth: kelajuan, kemasukan data, penyelarasan)?

easy and speed data entry
reduce mistake of staff.

17. Do you have any other comments, observations, or general feedback about the ezAccount system that has not been covered?

Adakah anda mempunyai sebarang komen, pemerhatian, atau maklum balas umum lain mengenai sistem ezAccount yang belum ditanya?

Beyond my expectation. Dealing with the students is professionally done and at ease. The group easily understand my requirement.
